

FIG.1

FIG.2

FIG. 3 is a perspective view of the device of FIG. 1 in a closed position. The device includes a housing 10, a lid 11, and a gasket 17. The lid 11 is shown in a dashed line indicating its position when closed. The gasket 17 is located between the lid 11 and the housing 10. The housing 10 has a top edge 10A and a bottom edge 19. The lid 11 has a top edge 11A and a bottom edge 11B. The gasket 17 is made of a material that is compressible and resilient. The device is shown in a perspective view to illustrate its three-dimensional shape and the relative positions of its components.

FIG. 4

FIG. 5

FIG. 6

FIG. 7

FIG. 8

FIG. 9

FIG. 10

FIG. 11

FIG. 12 is a side view of the first embodiment of the device, showing the first embodiment of the device, which is a long, narrow, rectangular strip with a series of longitudinal ridges or grooves along its length. The device is shown in a cross-sectioned view, with the top and bottom edges being slightly curved. The ridges are formed by a series of parallel lines, and the grooves are formed by a series of parallel lines. The device is shown in a cross-sectioned view, with the top and bottom edges being slightly curved. The ridges are formed by a series of parallel lines, and the grooves are formed by a series of parallel lines.
